

Dev S Panchal

🔗 devpanchal2005 | in devpanchal2005 | 🌐 devpanchal2005.github.io | 📄 panchaldev-certificates.notion.site

Summary

Aspiring Data Analyst and Data Scientist with hands-on experience across the full data lifecycle: cleaning, exploration, modeling, and visualization. Proficient in Python, SQL, and Power BI, with applied knowledge of machine learning to solve real business problems. Seeking an internship where data drives decisions and analytical work creates measurable impact.

Experience

Data Analyst

Ahmedabad, India

Relig Global (Hybrid)

Nov. 2025 – Present

- Built and maintained interactive Power BI dashboards consolidating data from multiple sources, enabling real-time tracking of portfolio performance and client metrics across business units.
- Wrote complex SQL queries and Python scripts to extract, clean, and transform large financial datasets, identifying trends and anomalies that directly informed trading and operational decisions.
- Automated recurring data reconciliation workflows using Python (pandas, openpyxl), eliminating manual spreadsheet work and cutting weekly reporting turnaround from 3 days to same-day delivery.

Education

LJ University

July 2023 – Present

B.Eng in Artificial Intelligence and Data Science

Projects

PredictGrad – Academic Risk Detection with ML

Jun 2025

[thepredictgrad.streamlit.app](#)

- Developed end-to-end regression and classification workflows using ensemble methods (Ridge, CatBoost, ExtraTrees, BalancedBagging with Voting/Stacking) to predict scores and identify students at academic risk.
- Built an interpretable risk analysis dashboard powered by SHAP insights; Attained MAE between 5.16–7.10 and an F1-score of 0.51.

Attendance for Impact – Learning Impact & Bias Detection Tool

Feb 2025

[attendance-for-impact.streamlit.app](#)

- Designed an analytical tool that links subject-wise attendance with theory and practical performance, uncovering hidden academic patterns.
- Delivered statistical insights (skewness, IQR, standard deviation, mean-median analysis) and dashboards to provide actionable recommendations for institutions.

GaiaSentinel – Detects & Categorize Waste

Mar 2025

[gaiasentinel.streamlit.app](#)

- Built a vision-based system leveraging machine learning to automatically classify waste into predefined categories, supporting recycling and sustainability efforts.
- Delivered real-time image analysis with detailed classification reports, performance metrics, and visual insights to monitor waste patterns over time.

Technologies

Python, Pandas, NumPy, Scikit-learn, TensorFlow, Keras, Matplotlib, Seaborn, PostgreSQL, MySQL, MongoDB, Streamlit, Power BI, Excel/Google Sheets, Git

Skills

Supervised Learning, Deep Learning, Data Analysis, Statistical Analysis, Data Visualization, Feature Engineering, EDA, SQL, NoSQL
