Summary

Applied AI Engineer with about a year of experience building RAG and document-processing systems for financial workflows. Cut weekly reporting turnaround by 66% through Python automation. Strong in Python, FastAPI, LangChain, and vector search. Owns problems end-to-end, from raw data to shipped features.

Experience

AI Engineer *Ahmedabad, India*
Relig Global (Hybrid) *Nov. 2025 - Present*

- Built a RAG pipeline over unstructured financial reports and client documents: PDF parsing, chunking, embeddings, and vector retrieval for LLM workflows.
- Designed Python ML and data pipelines that turn raw financial data into structured signals used in trading and operational decisions.
- Automated reconciliation and reporting with Python (openpyxl), cutting weekly turnaround from 3 days to same-day (66% reduction).
- Translated ambiguous business requirements into shipped ML and GenAI automation, owning delivery end-to-end.

Projects

ScholarBot - Hybrid RAG Assistant for School FAQs *Jan 2026*

- Built a hybrid chatbot pairing a rule-based intent engine with a Gemini 2.5 Flash fallback, grounded in school PDFs via sliding-window chunking.
- Structured the Flask backend as four modules (NLP, PDF parsing, intent classification, LLM orchestration) with confidence-threshold routing, so the LLM runs only on ambiguous queries.

PredictGrad - Academic Risk Detection with ML *Jun 2025*
thepredictgrad.streamlit.app

- Trained per-subject regression models on 905 student records (56 features) to forecast Semester 3 marks in 4 subjects; benchmarked 56 pipelines per subject, reaching test MAE of 5.71–7.10 on a 0–100 scale.
- Built a stacked classifier (CatBoost, balanced-bagged LightGBM, ExtraTrees) from 50 candidate pipelines to flag students likely to drop 10+ percentile points, with 0.66 recall on held-out data.
- Deployed a 6-page Streamlit app with SHAP explanations for interpretable risk predictions.

Education

LJ University , Ahmedabad *July 2023 - Present*
B.Eng in Artificial Intelligence and Data Science, CGPA: 9.09/10

Skills

GenAI & LLMs: LLMs, Generative AI, RAG Pipelines, Agentic AI, Prompt Engineering, Structured Extraction, Function/Tool Calling, LLM Evaluation, Evaluation Datasets, OpenAI & Gemini APIs
Frameworks & Retrieval: LangChain, LangGraph, LlamaIndex, LiteLLM, Hugging Face, ChromaDB, FAISS, pgvector, MongoDB Atlas, Embeddings, Document Parsing, Chunking, Hybrid Retrieval, Reranking
Backend & Infra: Python, FastAPI, Django, Flask, REST APIs, Async, Docker, AWS (S3, Lambda), Git, GitLab CI/CD, Linux
Data & ML: PostgreSQL, MySQL, MongoDB, Redis, SQL, NoSQL, Pandas, NumPy, PyTorch, TensorFlow, Keras, Scikit-learn, CatBoost, SHAP, NLP, Computer Vision, MLOps, Model Deployment
